***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, 5-7, drawn to a semiconductor device, classified in class 257, subclass 666.
- II. Claims 4,12-17 drawn to a method of making a semiconductor device, classified in class 438, subclass 125.
- III. Claim 8, drawn to a method of making a lead frame by sequential etching process, classified in class 438, subclass 734.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case said step of placing third conductor in claim 4 could have preceded the step of placing said semiconductor chip and the chip could have been placed in ceramic substrate instead of the claimed lead frame.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are a semiconductor chip on a lead frame and a method of making a lead frame by consecutive etching process without involving a semiconductor device.
